

## **Alliant Asset Management Company, LLC Chooses iManage WorkSite for Collaboration among Investors, Clients and External Parties**

*Firm Will Use iManage WorkSite for Collaborative Content Management and Knowledge Management*

FOSTER CITY, Calif., Aug. 25, 2003 -- iManage, Inc. [iMAN](#), a leading provider of collaborative content management software for global enterprises, today announced that Alliant Asset Management Company, LLC, a tax credit syndicator, has chosen the iManage WorkSite(TM) solution to enable collaboration and enhance content management.

Alliant offers a full range of services to help corporate investors identify and pursue investments in affordable housing. Alliant has raised in excess of \$750 million of equity for Section 42 housing since 1997, while acquiring approximately 250 qualified apartment complexes. These highly complex transactions involve extensive content and numerous parties, including Alliant's Acquisition, Finance, Legal and Asset Management departments, various state housing authorities, lenders, and corporate investors, in addition to accountants and counsel for each of the parties. Alliant previously relied on emailed attachments, overnight shipping, phone calls, voicemails and in-person meetings in order to share information and close deals, a costly and time-consuming process. Seeking to improve the efficiency of its operations and better manage its content, Alliant turned to iManage.

Alliant will deploy iManage WorkSite firm-wide to bring each transaction's internal and external participants into a unified environment where they can share documents and collaborate throughout the deal cycle. iManage Worksite's version control and collaborative editing functionality can prevent revision errors and ensure that Alliant's professionals are able to use the most current version of documentation, which is extremely important for Alliant as most documents are negotiated and re-negotiated dozens of times prior to closing. Alliant will also use iManage WorkSite for knowledge management, making it simple to find and re-use documents from similar past transactions.

"Our business involves moving a tremendous volume of content among a large group of individuals. By making all of a deal's content available in one workspace where people can work on it together, the iManage WorkSite solution will help us improve the timeliness and accuracy of information that are essential to our success," said Warren Harrison, Vice President of Alliant Asset Management Company.

"It is all too easy for complex transactions to go astray when you have got documents scattered throughout email systems, laptop computers, local network servers and overnight shipments," said Craig Smith, iManage vice president of North American sales. "The iManage WorkSite solution keeps everything together so that the individuals involved in these deals can always get their hands on and share the latest, most accurate content."

iManage partner CMJ Information Technology will provide deployment support for Alliant's iManage WorkSite implementation.
